# Micro-Die Capacitor Sorter

**Test and Sort Capacitors  
quickly and accurately!**

Electrosort Automation  
*'Testing the Limits'*

TEL: (610) 258-7678

**This Sorter is tooled to handle all Die types and sizes.** The throughput of this sorter is up to 12,000 parts per hour. Parts are sorted into eleven bins, ten test instrument directed, and a reject overflow bin.

Our Sorter is now equipped with a bright, easily read display which shows the current bin, throughput in parts per hour and diagnostic information.

**New! Our Sorters are now equipped with acoustic bin sensing that monitors the bin solenoids and stops the machine before a bin sorting error happens!**

## Micro-Die Capacitor Sorter Details and Options

Our Sorter can be interfaced with the HP4278A or the tester of your choice and arrives at your facility pre-configured to run with your tester! If you need to run this sorter with different testers the interface can easily be changed by moving jumpers.

Our Sorter is now equipped with a durable high speed vacuum solenoid power supply which optimizes the sorters performance and provides precise pick and placement of the die.

### Options:

Chiller – maintain a constant temperature in the test chamber for great test results!

Vacuum generator– This generates 25” Hg vacuum from 80 PSI Air.

Model 015 Die Sorter

## Sorter Specifications

- Up to 12,000 parts per hour
- Footprint 35”X27”
- Facility requirements 120 Volts AC 60 HZ, or 240 Volts AC 50 HZ
- 25” Hg vacuum.

Sort your Capacitors into 11 bins.
